

The contraceptive counseling discussion is a billable service separate from the provision of a contraceptive method. The below guidance can help you bill for the work you provide.

Z30.0 – Encounter for general counseling and advice on contraception

This code is used in two scenarios:

1. When providing a contraceptive method other than an IUD or implant
2. After counseling has been conducted and no method is provided during the visit

Z30.014 – Encounter for initial prescription of an IUD

This code covers the initial prescription of the IUD, counseling and advice, **but** excludes the insertion

Z30.430 – Encounter for IUD

The IUD insertion itself is billed separately using this code

Z30.017 – Encounter for initial prescription and insertion of an implant

This code covers initial prescription of the implant, counseling and advice, **and** insertion of device (even if it happens at a different encounter)

Unlike the IUD codes, this code for provision of an implant is inclusive of counseling
